Ukrainian (Native)
English (B2)

Profile

I'm Nazarii - an ambitious fullstack developer. For now, I have more than 4 years of experience (including freelance) in web development.

A this point, I'm using a lot of pure JavaScript, so switching between frameworks should not be a big problem for me.

Employment History

FullStack Developer , Atlasiko Inc., Vinnitsia

JUNE 2021 – PRESENT

My current company is a mix of outsource and product company, so I have a lot of different responsibilities.

My key responsibilities are:

- Maintaining the company's product (Angular.js, Express.js - internal system, Vue.js, Nuxt.js - public part)
- Developing and maintaining our own SSR "framework" which was created by me.
- Developing web apps for the company's clients.
- Providing infrastructure for other developers (maintaining NPM packages, developing of data access library, writing basic pipelines, basic server configuration, creation of CLIs, etc.).
- Sometimes interviewing and mentoring juniors.

Speaking about achievements and interesting tasks, I have:

- Created our own some sort of "framework" for SSR, based on Native Web Components and Node.js
- Created a CLI for quick starting of new websites based on this "framework".
- Increased product Node.js server performance by using Workers.
- Covered data access library with tests.
- Made our main system more modular, unified modules, made basic module's function cross-platform (our Angular.js modules can do basic things event in Node.js environment).

FullStack Web Developer , Freelance

JUNE 2019 – JULY 2021

I started from just simple transforming designs to HTML and CSS, later I learned PHP and WordPress and started making websites using these technologies. While freelancing, I have made a lot of WordPress themes with different difficulties. Then, I started to learn the Laravel framework and even made a few commercial websites using this framework. Later, I decided to focus only on JavaScript and Vue framework. My last freelance order was for a large Vue web store with its own CRM system.

While freelancing, I have tried a lot of different technologies and received knowledge from similar areas of work (e.x working with hostings, basic VPS configuring, basic knowledge of how DNS works, basics of SEO, schema.org integration, and more).

Also, I have done a lot of layout work, I had a regular client, for whom I made layout for 10+ orders, with 20+ unique pages in each order. Now I can say that I can really quickly and professionally transform any design you can imagine into a perfect layout.

Additionally, I have much experience with website loading speed optimization.

I can share links for my freelance profiles with reviews if needed.

Courses

Responsive Web Design, FreeCodeCamp

2019

JavaScript Algorithms and Data Structures, FreeCodeCamp

2019
